DIGITIZATION... WHAT MATTERS?

By: Wan Mazli bin Wan Razali (mazli@sarawak.gov.my)

Implementing digitization project is a big deal, especially in the collection of historical photos almost century old. We have started with Westport House Historical photos. It is an astonishing collection to start with, simply because, probably the house is really a "History" in itself, due to town development or the house could have had historical events held in it which adds value to the photo itself.

The newly acquired Flatbed Scanner, Epson Perfection V850 Pro Scanner is sufficient to perform photo and A4 size documents scanning. "Convert film, slides, prints, and other documents into high resolution digital images with the Perfection V850 Pro Scanner from Epson. The high 6400 dpi optical resolution and 6400 x 9600 dpi scan resolution along with a 48-bit color depth ensure fine detail will be captured and colors will be accurately reproduced." The scanning result was amazing. The Polaris Fusion server will be utilized for organizing the digital photos and to enable viewing on the Internet. The Digitization Team assigned to this project has been working closely on scanning photos and learning the Polaris Fusion server. The continuation of digitization project is crucial for The Westport Library to preserve the memory of Westport and make it available digitally for its people.

Digitization, "BIG" word but anybody can do it. Simple flatbed scanner will enable library to start with digitization work. Make a simple, specific and achievable goals e.g. digitization of photograph or letters to start with digitization project before setting up commitment to something big. Make digitization as enjoyable task as possible as if you are arranging and giving names to your own photo collections. Digitization with smartphone and tablet with operating system either Android or iOS is possible. Mobile Apps such as TinyScan or TurboScan from Apple Store to name a few, will enable simple and quick digitization. But, remember, always give your professional "touch" to your digitization works by providing metadata. Digital Images are very impressive to browse, if you have a set of information for viewers to know and understand what is it all about. Lastly, please observe the Copyright Law of your country and abide by it.
